

Resumen

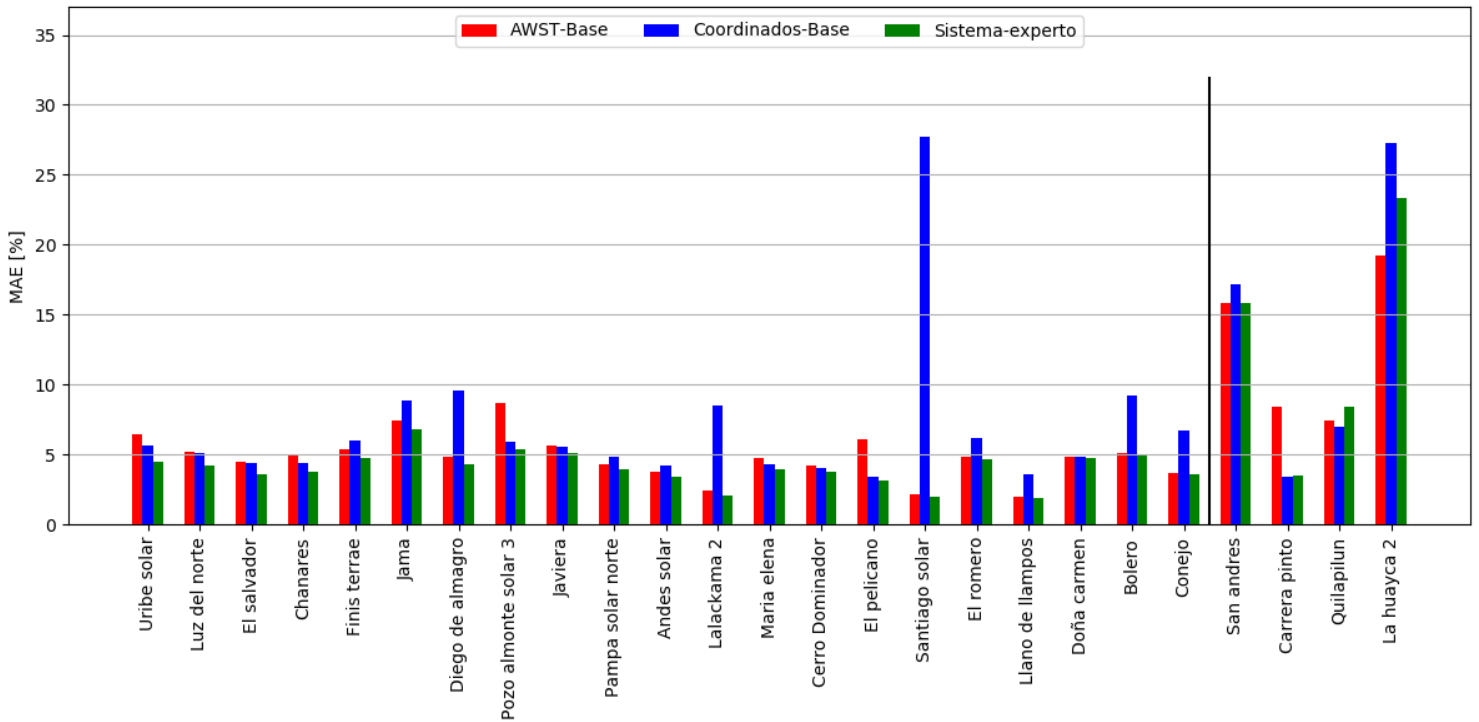

El sistema experto ha tenido un rendimiento satisfactorio y demuestra mejor precisión que AWST y Coordinados para la mayoría de parques.

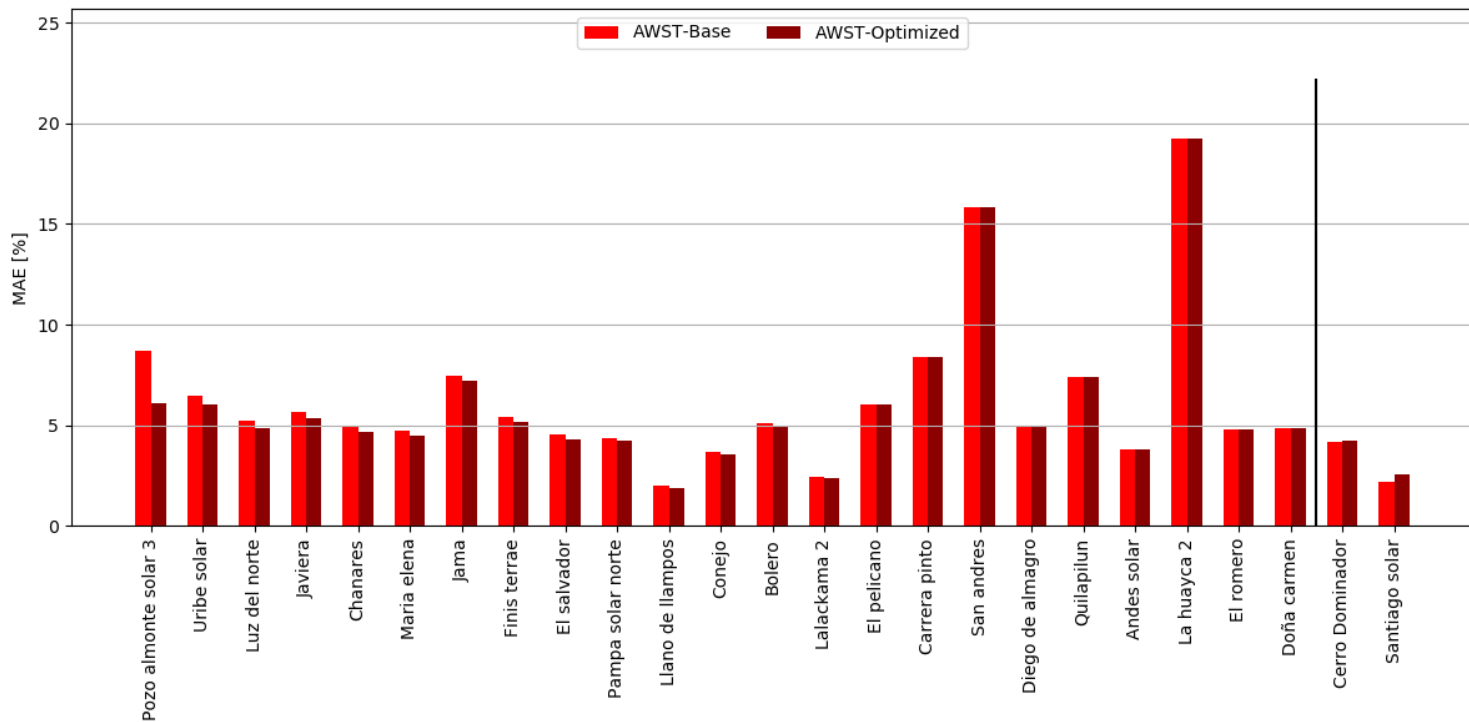

- San Andres tuvo una potencia restringida a 18 MW.
- El 05/02 no llegaron pronósticos.
- El 02/02 no llegaron mediciones.
- El parque Quilapilun parece tener una potencia restringida a 90 MW.
- La Huayca 2 tuvo mediciones con valores iguales a cero.
- La evaluación se hace solo para los tiempos en los que AWST, Coordinados, Sistam Experto y mediciones están disponibles. Es por esto que no hay un valor para el 02 y 05/02, así como tampoco para Los Loros, este parque no tiene pronóstico de 'Coordinado'.
