# 1. IDENTIFICACIÓN

- ◆ Nombre del Proyecto : PF San Pedro 106 MW
- ◆ Número Único de Proyecto (NUP) : 1672
- ◆ Empresa Propietaria del Proyecto : GPG SOLAR CHILE 2017 SpA

# 2. INTRODUCCIÓN

Actualmente, GPG SOLAR CHILE 2017 SpA se encuentra desarrollando el proyecto Parque Fotovoltaico San Pedro (en adelante PF San Pedro) de 106 MW de potencia instalada. El PF San Pedro se divide administrativamente en 2 proyectos, San Pedro I y San Pedro IV, los cuales inyectan su energía a través de un sistema de cables subterráneos en 33 kV que llega a la subestación seccionadora Lasana 220/33 kV, que secciona la línea existente 1x220 kV Calama – Solar Jama. También es parte del alcance del proyecto, la construcción de 2,9 km de línea 2x220 kV, desde la subestación Lasana hasta la Est. N°18 de la línea Calama – Solar Jama, estructura preparada para realizar el seccionamiento de la línea y que se encuentra instalada.

En este sentido, NATURGY adjudicó a I-SEP el desarrollo del informe técnico de determinación de mínimo técnico, el cual es requerido por el Coordinador Eléctrico Nacional para la entrada en operación del proyecto. En la Figura 2-1 se muestra el Diagrama Unilineal del PF San Pedro.

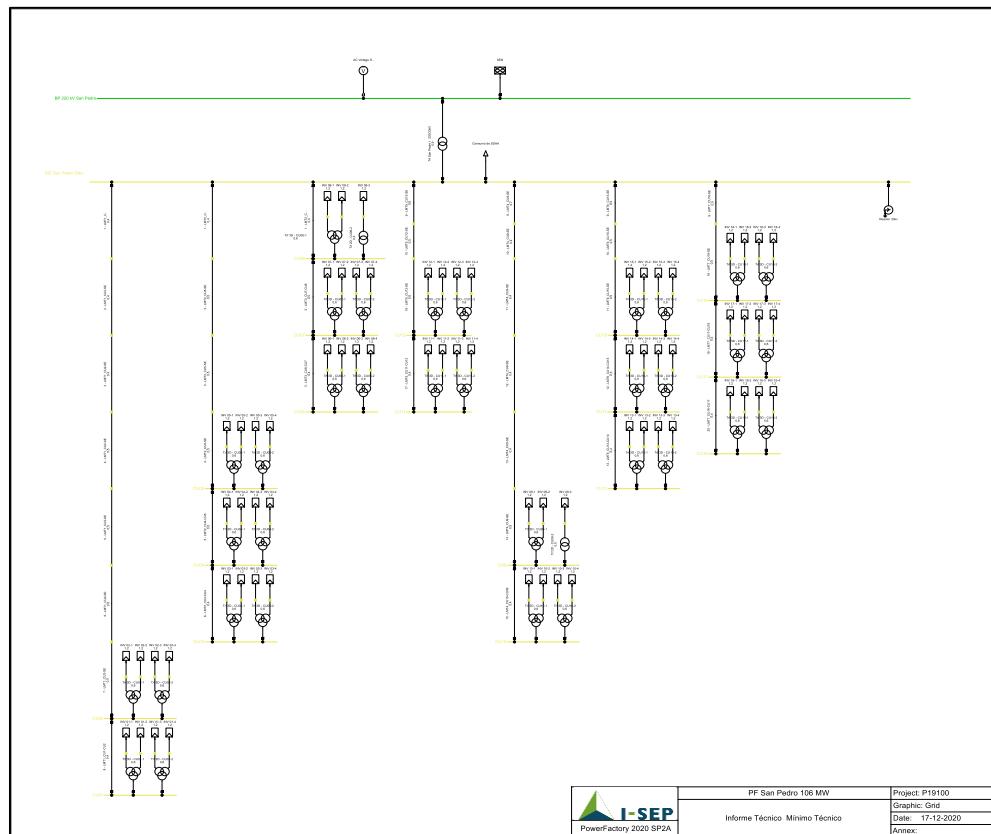

Figura 2-1 Diagrama Unilineal del PF San Pedro.

## 3. OBJETIVOS Y ALCANCE

El objetivo del presente informe es establecer los parámetros de mínimo Técnico del proyecto PF San Pedro, según las pruebas realizadas en el parque y los lineamientos establecidos en el **Anexo Técnico: Determinación de mínimos técnicos en Unidades Generadoras**.

## 4. ANTECEDENTES

Los antecedentes y registro de mediciones consultados para la realización del presente informe fueron los siguientes:

- a) Registro de mediciones realizadas en terreno “Mínimo Técnico.xlsx” día 05/12/2020.
- b) Base de datos de PowerFactory “BD\_MinTec.pfd”, desarrollada por I-SEP.
- c) Documento “INGECONSUN1640TLB630H2570\_REV1.xlsx”, facilitado por el cliente.
- d) Documento “INGECON+SUN+Power+Serie+B+@1500Vdc.pdf”, facilitado por el cliente.
- e) Documento “ABQ0000IMC08\_A.pdf”, elaborado por Ingeteam.

## 5. DESCRIPCIÓN TÉCNICA DEL PROYECTO

El PF San Pedro, ubicado a unos 18km al sureste de la ciudad de Calama, se subdivide administrativamente en dos proyectos colindantes, denominados San Pedro I y San Pedro IV, y tiene una capacidad de inyección autorizada de 106 MW en el Sistema Eléctrico Nacional (SEN). En total, el parque contempla la instalación de 234696 módulos fotovoltaicos bifaciales de 430/435Wp, organizados en 8382 strings. La totalidad de los módulos fotovoltaicos son explotados en conjunto y en los dos emplazamientos antes detallado. La situación y la disposición del parque se indica en la Figura 5-1.

Para la evacuación de la energía al SEN, el parque incluye la construcción de una subestación elevadora, denominada S/E Lasana, construida con una configuración de barra principal 220 kV más una barra de transferencia de 220 kV y compuesto por 5 paños. En dicha subestación se ubica un único transformador de poder de 120 MVA, 220/33 kV.

La transmisión de la energía del Parque al SEN se realizará en la SE Calama, propiedad de Transemel, a través del seccionamiento de la línea de transmisión existente Solar Jama – Calama 1x220 kV en la Torre 18. Desde dicho punto, se ha construido una nueva línea aérea 220 kV de doble circuito y de 2,942 km de longitud, con 11 apoyos intermedios entre la subestación de la Planta Solar Fotovoltaica San Pedro (S/E Lasana) y el punto de conexión a la red en el apoyo T1 correspondiente a la estructura N°18 de la línea existente Solar Jama - Calama.

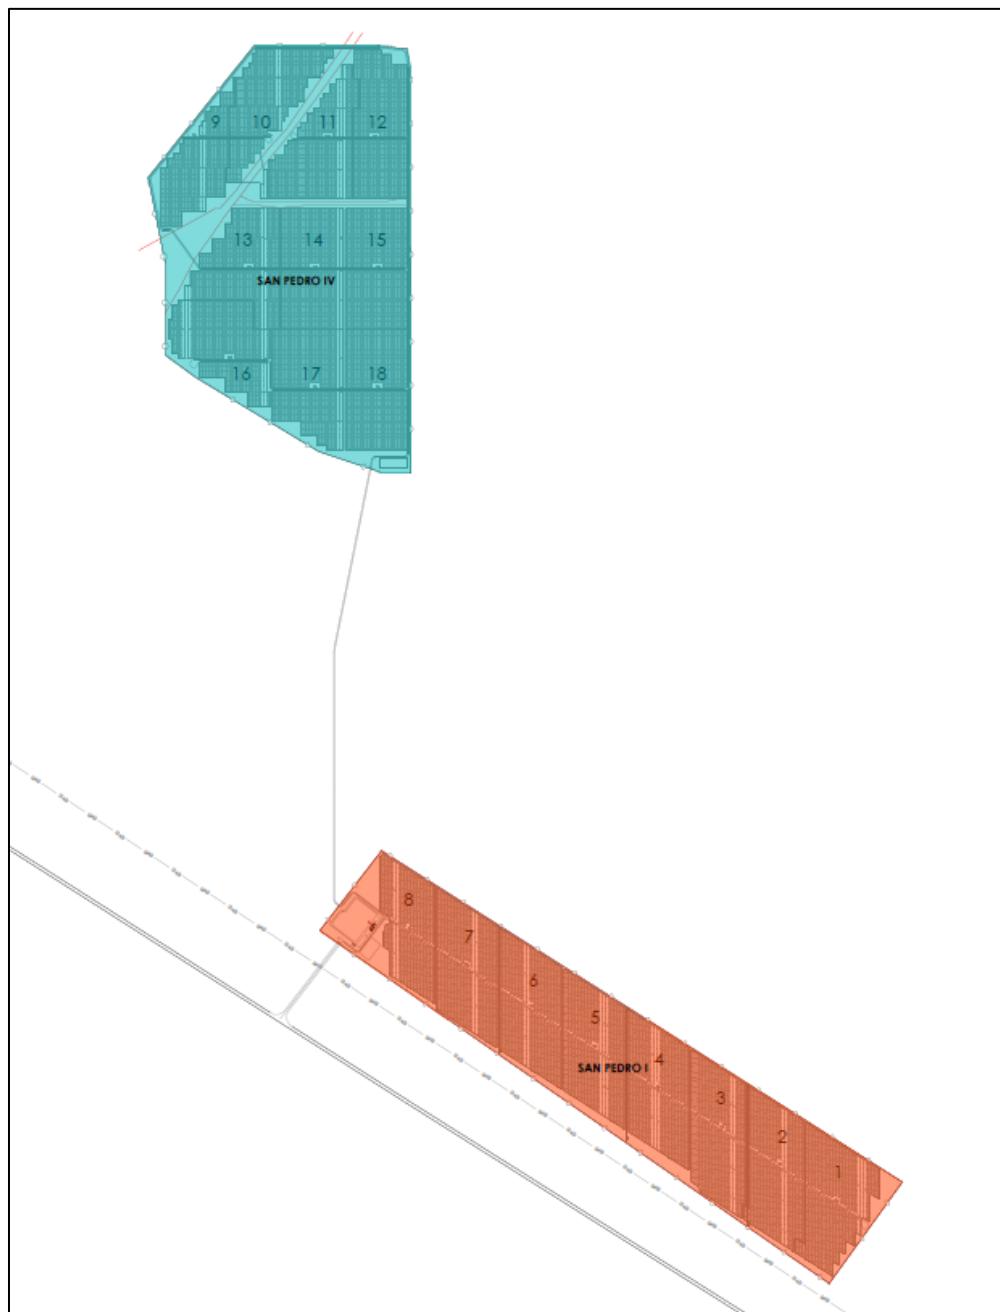

Figura 5-1 PF San Pedro – San Pedro I & IV

A nivel de media tensión, el parque está conformado por un total de 70 inversores marca Ingeteam, modelo 1640TL B630, de 1,637 MVA de potencia nominal. Estos inversores están distribuidos en 18 centros de transformación, conectados a 7 circuitos, tal y como se muestran en la Figura 5-2 y Figura 5-3. Para la conexión a la red de media tensión los inversores utilizan un transformador que eleva la tensión de los 630 V a los 33 kV a nivel de la red de media tensión.

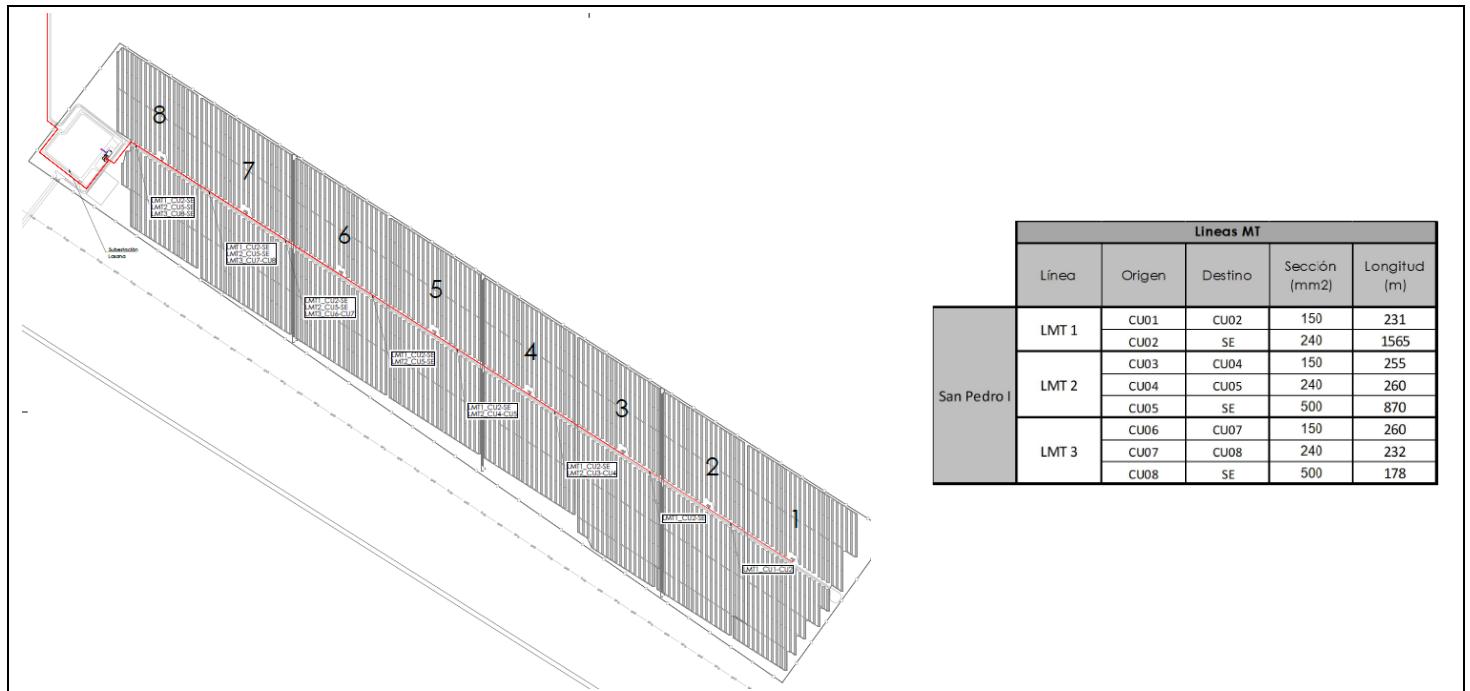

Figura 5-2 Red colectora o MT de San Pedro I.

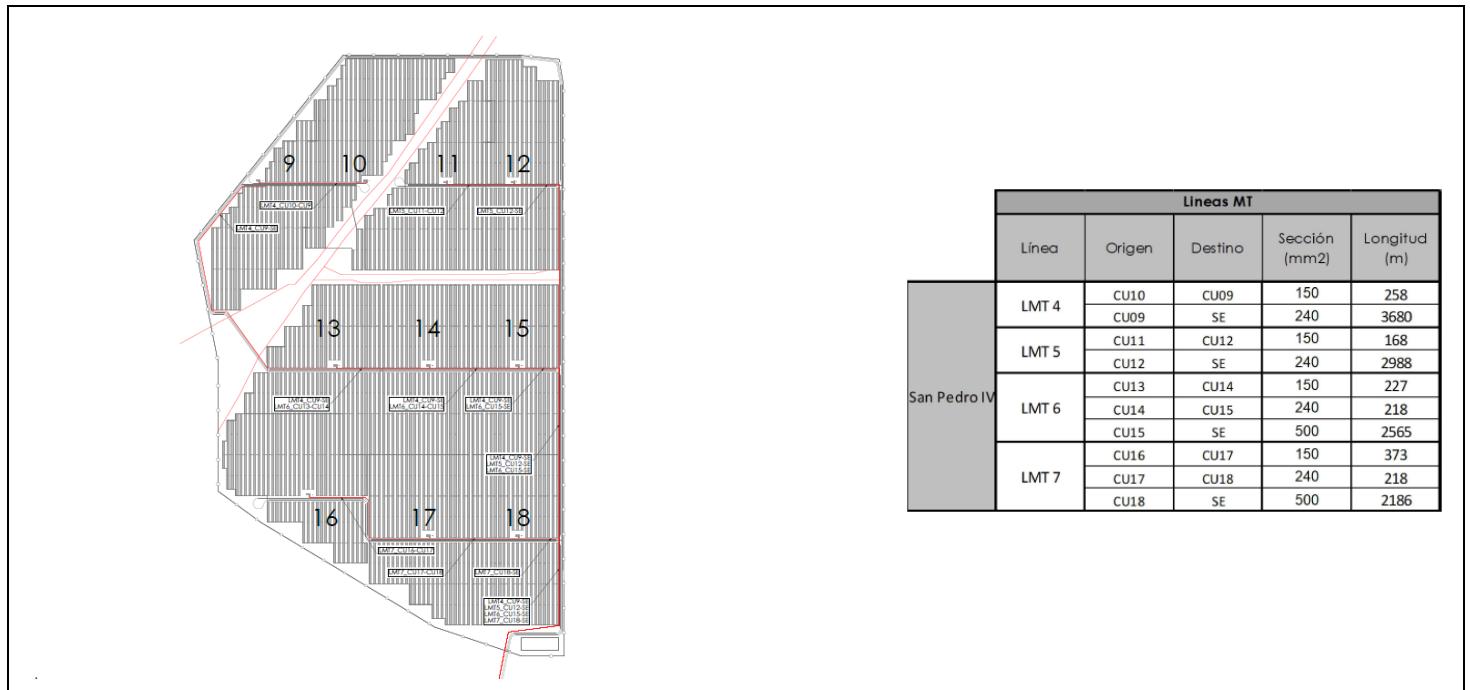

Figura 5-3 Red colectora o MT de San Pedro IV.

A continuación, se detallan las principales características de los principales elementos que conforman el parque fotovoltaico, y que son relevante para el desarrollo del presente documento.

## 5.1. TRANSFORMADOR PRINCIPAL

Los parámetros técnicos del transformador elevador del PF San Pedro, son los indicados en la siguiente tabla:

**Tabla 5-1 Parámetros transformador de poder 220/33 kV – Trf N°1 PF San Pedro.**

PARÁMETROS	VALOR
Potencia Nominal ONAN	90 [MVA]
Potencia Nominal ONAF	120 [MVA]
Niveles de Tensión	220/33 [kV]
Grupo de conexión	YNd11
Impedancia de secuencia positiva (Base 102 MVA)	14,5%
Impedancia de secuencia cero (Base 102 MVA)	13,4%

## 5.2. INVERSORES PF SAN PEDRO

El proyecto PF San Pedro cuenta con un total de 70 inversores de la marca Ingeteam. Los parámetros técnicos de los inversores del PF San Pedro se indican en la siguiente tabla:

**Tabla 5-2 Parámetros de los inversores del PF San Pedro.**

PARÁMETROS	VALOR
Fabricante	Ingeteam
Modelo	1640TL B630
Potencia Nominal	1,637 [MVA]
Tensión Nominal	0,63 [kV]
Corriente de cortocircuito	2,04 [kA]

## 5.3. TRANSFORMADORES 33/0,63 kV

Los parámetros técnicos de los transformadores de 33/0,63 kV correspondiente a los inversores del PF San Pedro se indican en las siguientes tablas:

**Tabla 5-3 Parámetros transformadores de bloque de dos devanados 33/0,63 kV.**

PARÁMETROS	VALORES
Potencia Nominal	4,92 [MVA]
Niveles de Tensión	33/0,63 [kV]
Grupo de conexión	Dy11
Impedancia de secuencia positiva (Base 4,92 MVA)	8,00 [%]
Impedancia de secuencia cero (Base 4,92 MVA)	8,00 [%]
Pérdidas en el cobre	44,28 [kW]
Pérdidas en vacío, secuencia positiva	4,92 [kW]
Corriente de magnetización, secuencia positiva	0,5%

**Tabla 5-4 Parámetros transformadores de bloque de tres devanados 33/0,63/0,63 kV.**

PARÁMETROS	VALORES
Potencia Nominal Primario	6,56 [MVA]
Potencia Nominal Secundario	3,28 [MVA]
Potencia Nominal Terciario	3,28 [MVA]
Niveles de Tensión	33/0,63/0,63 [kV]
Grupo de conexión	Dy11y11
Impedancia de secuencia positiva (Base 3,28 MVA)	8,00 [%]
Impedancia de secuencia cero (Base 3,28 MVA)	8,00 [%]
Pérdidas en el cobre	58,95 [kW]
Pérdidas en vacío, secuencia positiva	6,56 [kW]
Corriente de magnetización, secuencia positiva	0,5%

## 6. REVISIÓN NORMATIVA

A continuación, se exponen los principales estándares normativos (Anexo Técnico: “Determinación de mínimos técnicos en unidades generadoras” disponible en la página de la CNE) que son de relevancia para el presente informe.

### Artículo 9: Informe Técnico:

El Informe Técnico que respalda el valor de Mínimo Técnico o Informe de Mínimo Técnico, consistirá en un documento que describa los registros de operación, supuestos, metodologías, alcances de la aplicación de estas metodologías, y conclusiones bajo los cuales se estableció el valor de Mínimo Técnico informado.

Este informe deberá contener, al menos, la siguiente información:

- Antecedentes técnicos de diseño.
- Recomendaciones del fabricante y antecedentes nacionales o internacionales de unidades de similares características.
- Antecedentes de operación de la unidad generadora, incluyendo los registros y descripción de los análisis y pruebas efectuadas.
- Justificaciones que describan las eventuales fuentes de inestabilidad en la operación de la unidad generadora, que impidan que la unidad pueda operar en un valor menor de potencia activa.
- Antecedentes técnicos que respalden y expliquen el comportamiento esperado o desempeño registrado.

Para el caso de unidades generadoras que puedan operar con combustible alternativo y cuyo valor de Mínimo Técnico sea distinto al del combustible principal, deberán entregar los antecedentes requeridos en el presente Anexo para el combustible principal y el alternativo.

Una vez recibido el Informe Técnico, la DO deberá verificar que dicho informe contiene todos los antecedentes especificados en el presente Artículo, para lo cual tendrá un plazo de 15 días hábiles. En el caso de detectar que existen antecedentes faltantes para un adecuado análisis del Mínimo Técnico informado, la DO solicitará a la Empresa Generadora completar el informe, para lo cual ésta tendrá un plazo de 15 días hábiles.

Cuando la DO determine que el Informe Técnico entregado por la Empresa Generadora contiene todos los antecedentes necesarios para su análisis, lo publicará en el sitio web del CDEC y notificará a las empresas Coordinadas sobre el inicio del proceso de aprobación del Mínimo Técnico informado.

## 7. DETERMINACIÓN DE MÍNIMO TÉCNICO

### 7.1. DEFINICIÓN DE PUNTOS DE MEDICIÓN

A continuación, se describe un sistema equivalente que presenta un parque fotovoltaico conectado al Sistema Eléctrico Nacional (SEN), con el cual se puede definir lo siguiente:

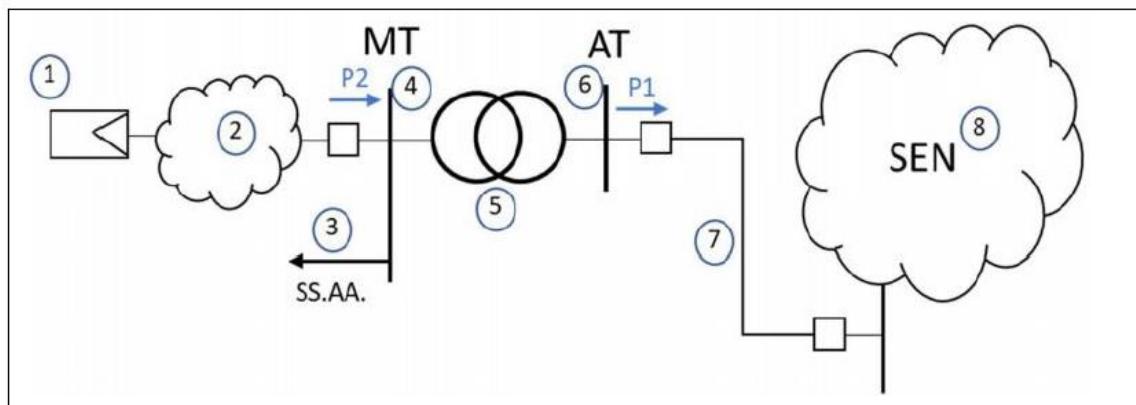

Figura 7-1 Sistema Equivalente parque fotovoltaico.

Los componentes del parque son los siguientes:

1. **Generador equivalente:** Corresponde a la suma de los aportes distribuidos de potencia activa alterna de cada inversor del PF San Pedro.
2. **Pérdidas en sistema colector del parque:** Corresponde a las pérdidas del sistema colector del PF San Pedro, principalmente en el sistema de cables de media tensión, y en los transformadores asociados a los centros de transformación.
3. **Servicios Auxiliares (SSAA) de la central.**
4. **Barra de media tensión (MT):** Corresponde a la barra de 33 kV que conecta con el lado de baja tensión del transformador de poder de la central.
5. **Transformador de poder:** Equipo elevador de 220/33 kV presente en la subestación de salida del PF San Pedro.

6. **Barra de alta tensión: (AT):** Corresponde a la barra de 220 kV que conecta con el lado de alta tensión del transformador de poder de la central.
7. **Línea dedicada de la central:** Línea dedicada que vincula el PF San Pedro con el Sistema Eléctrico Nacional.
8. **Sistema Eléctrico Nacional (SEN).**
9. **P1:** Potencia inyectada por el PF San Pedro en la barra de 220 kV de su subestación de salida.
10. **P2:** Potencia inyectada por el PF San Pedro en la barra de 33 kV de su subestación de salida.

## 7.2. CÁLCULO MÍNIMO TÉCNICO

Se realizaron los ensayos para la determinación del mínimo técnico del Parque PF San Pedro el día 5 de diciembre del 2020. Dichos ensayos consistieron en el cambio de consigna de la generación de potencia activa a 0 MW durante un intervalo de 32 minutos a través del PPC, mientras que en forma simultánea se realizaron las medidas para determinar el mínimo técnico del parque y la potencia activa inyectada en la barra de 220 kV del parque (P1). Posteriormente se vuelve a la consigna inicial para re establecer la operación del parque.

En la figura 7-2 se observa el gráfico de potencia activa para las pruebas mínimo técnico realizadas en el PF San Pedro obtenida por medio del antecedente (a). Para la obtención de la potencia activa inyectada en la barra de 220 kV del parque (P1) se calcula un promedio aritmético de las mediciones realizadas en terreno entre las 13:08:47 a 13:41:30 hrs ante un cambio de consigna de 0 MW.

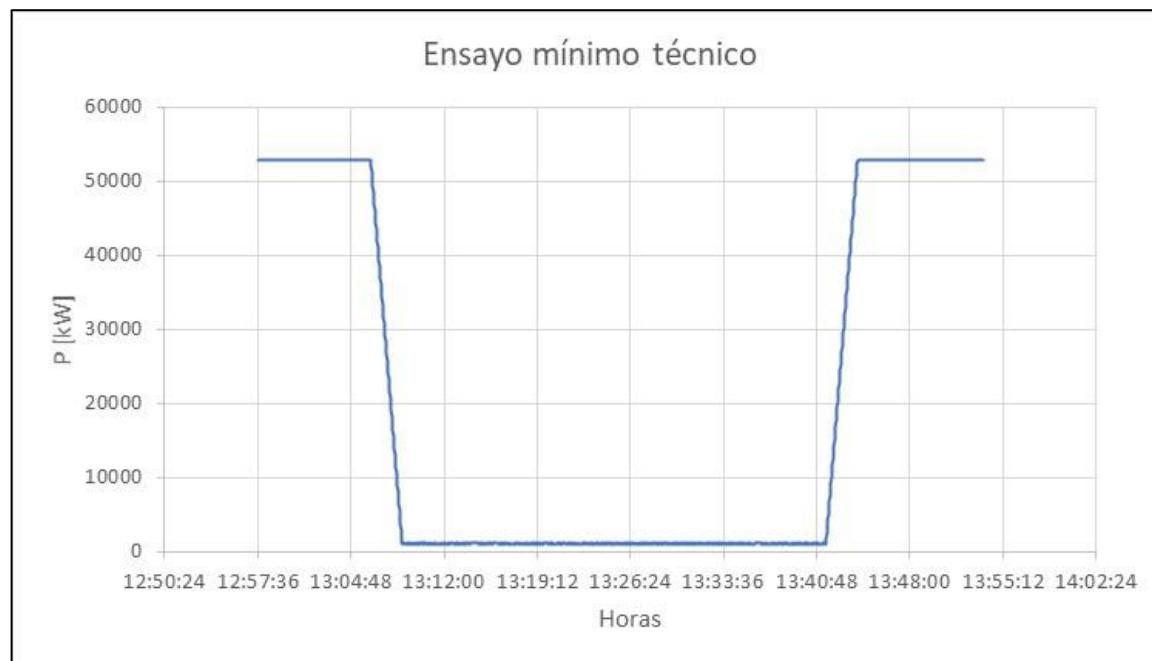

Figura 7-2 Registro de potencia activa ante ensayo de mínimo técnico.

A partir del resultado indicado en la Tabla 7-1, se verifica que ante una consigna de 0 MW los inversores son capaces de seguir operando de manera estable a aproximadamente un 1% de la potencia nominal.

**Tabla 7-1: Promedio del registro.**

PARÁMETRO	POTENCIA [MW]
Potencia inyectada en la barra de 220 kV del parque (P1)	1,052

Finalmente, con los resultados obtenidos del ensayo se puede determinar el mínimo técnico del parque considerando las pérdidas del sistema y el consumo de los servicios auxiliares, tal y como se especifica en la siguiente ecuación:

$$MinTec = P1 + P_{trafo} + P_{colector} + SSAA$$

Donde:

- P1 : Potencia Activa inyectada en la barra de alta tensión (AT) del parque [MW].  
 P<sub>trafo</sub> : Pérdidas activas en el transformador de poder del parque [MW].  
 P<sub>colector</sub> : Pérdidas activas en el sistema colector del parque [MW].  
 SSAA : Consumo asociado a los Servicios Auxiliares del parque [MW].

Las pérdidas del sistema colector de media tensión y del transformador de poder se obtienen mediante simulaciones en la base de datos del antecedente (b). Dicha simulación indica las pérdidas del sistema colector y del transformador de poder como “Grid Losses” (ver Anexo I). Para ello, se consideró una inyección de 19,699 kW por inversor para que el PF San Pedro inyecte 1,052 MW en la barra de 220 kV. Por lo tanto, se obtiene como resultado 0,310 MW de pérdidas en el sistema colector y el transformador principal del parque. Por otra parte, el consumo de los Servicios Auxiliares (SSAA) resulta en un valor de 15,665 kW, el cual corresponde al promedio de los registros tomados durante el ensayo de mínimo técnico señalados en la Figura 7-2.

**Tabla 7-2 Promedio potencia activa SSAA.**

REGISTRO DE CONSUMOS DE LOS SERVICIOS AUXILIARES	
REGISTRO	P [kW]
Registro 1 potencia activa SSAA	16,88
Registro 2 potencia activa SSAA	16,02
Registro 3 potencia activa SSAA	17,59
Registro 4 potencia activa SSAA	11,30
Registro 5 potencia activa SSAA	16,14
Registro 6 potencia activa SSAA	16,06
Registro promedio potencia activa SSAA	15,665

**Nota:** Las imágenes que contienen los registros de consumos de los SSAA se pueden encontrar en el Anexo II del presente documento.

En virtud de lo señalado, el mínimo técnico del parque se determina de acuerdo con lo siguiente:

$$MinTec = 1,052 \text{ MW} + 0,310 \text{ MW} + 0,015665 \text{ MW} = 1,378 \text{ MW}$$

En consecuencia, considerando la metodología descrita en el presente informe, se calcula que el mínimo técnico del PF San Pedro es de 1,378 MW.

## 8. CONCLUSIONES

En el presente informe se obtuvo el parámetro de mínimo técnico para el PF San Pedro. Lo anterior según los datos obtenidos de las pruebas realizadas el día 05/12/2020. Para ello se realizó un cálculo de la media aritmética de los registros obtenidos entre las 13:08:47 - 13:41:30 (horas Chile) del registro “Mínimo técnico.xlsx”. Luego, al sumar las pérdidas del sistema colector y transformador principal, obtenidas a través de una simulación en el software PowerFactory y agregando el promedio de consumo de los servicios auxiliares se obtiene un valor de mínimo técnico de 1,378 MW.
